

South Omaha Elementary/Middle School Boundary Options

Online Survey Feedback

As of 5/1/19

OPTION 1

- 1) My kids go to Chandler view and love it there, why screw it up by making them cut their time with them by a year.
- 2) I do not support the option as they do not fully distribute the student populations evenly to the middle schools in South Omaha.

OPTION 2

- 1) I do not agree with any of these because this gets rid of my boys' options of being in school since my oldest has to be in pre-k again 2019/2020 school year and my youngest son has to be in for 2019/2020 and 2020/2021 school year. This makes it difficult on me as well.
- 2) I do not support the option as they do not fully distribute the student populations evenly to the middle schools in South Omaha.

OPTION 3

- 1) I want our house to be in the Central High School area not Benson.
- 2) It messes with schools that are doing good the way they are. Yes, there needs to maybe be more schools but leave elementary schools pre-k to 6th.
- 3) I do not support the option as they do not fully distribute the student populations evenly to the middle schools in South Omaha.

ADDITIONAL COMMENTS, QUESTIONS AND FEEDBACK

- 1) We could cut down on considerable busing costs by having students attend the school in their neighborhood if we as tax payers are paying for their education. This is ridiculous to let all these people opt in to the district they want. They buy a house in the neighborhood of where they want their kids to attend elementary, middle and high school. I walk in the mornings and within a 5 block span we have 5 different buses taking students to whatever school their parents think is "right" for them. They are receiving a free education and have to still be selective on their school. Talk about another incident of "give me what I want and give it to me free" thinking!!!!
- 2) I just don't agree at all.

- 3) The attendance areas for the middle schools did not change very much. The population growth in some areas is very high in comparison with others and the student increase during different times of the school year should be looked at. Schools cannot turn away students who live in their home attendance area, but yet class sizes in the middle schools are growing to sizes that are becoming unmanageable for 11-14-year-old children to learn efficiently. The new middle school has the smallest attendance area in each proposal.
